

Active Indoor / Outdoor Grand Lenticular

Active Indoor/Outdoor displays enables outdoor and indoor media owners to replace the static, single-image messages that have to date characterized their advertising sites, with a far more effective and eye-catching animated sequence of up to four individual images. Media owners can now provide significantly better packages, agencies have greater flexibility in the design of their clients' outdoor messages, and advertisers can "tell the same stories" that they tell through their television campaigns on their outdoor advertising.

Your message deserves the dramatic visual presentation delivered by our Active Indoor/Outdoor display. Whether indoor or outdoor, your bold, illuminated, and now ACTIVE message will stop traffic wherever these displays are located. Each unit is built with rugged construction, which provides high levels of security, weather durability, and consistent performance. These cutting edge Active displays will improve your brand awareness and increase your media ROI at: malls, exhibits, sports arenas, transportation shelters, media venues, and much more.
